

Bite Size R

The Package Ecosystem - Exercise Answers

Keith Hurley

April 24, 2019

Try to complete the installation of the following packages onto your computer - then can all be found on the normal CRAN archive. These are packages that will be used during the Bite Size R series. When you are done installing, use the “library” function to load the packages and test that the installation was successful.

1. Install the tidyverse package

```
install.packages("tidyverse")  
library(tidyverse)
```

2. Install the rinat package

```
install.packages("rinat")  
library(rinat)
```

3. Install the rebird package

```
install.packages("rebird")  
library(rebird)
```

4. Install the devtools package

```
install.packages("devtools")  
library(devtools)
```

Alternatively, all the packages can be loaded at once as below.

```
install.packages(c("tidyverse", "inat", "rebird", "devtools"))  
library(tidyverse)  
library(rinat)  
library(rebird)  
library(devtools)
```
